

# STACK & TRUCK

YOU'RE ALWAYS IN CONTROL

## What is Stack&Track?

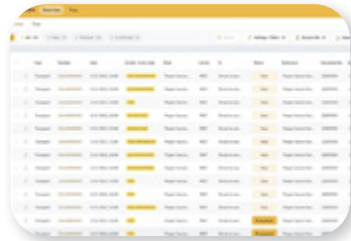

Stack&Track is the new digital platform that allows you to manage your packaging flows. With the platform you can track and manage your packaging flows in one central platform, giving you more control over where load carriers are located and showing you exactly how many and what type of load carriers they are.

## How does Stack&Track work?

Stack&Track consists of two parts: an online platform and an app. You can choose whether to use only the online platform or both. The digital platform is linked to various external systems. With Stack&Track, you therefore only need to log in one place, while you order, declare and administrate for, among others, EPS and CBL packaging.

Without further intervention, the data is synchronised with all other systems you may already be using. The platform offers you a real-time overview of your supply chain, from dispatch to delivery. You can share information with all parties involved and receive real-time notifications about any problems.

The smart app allows you to photograph a pallet of crates. The app recognises the number and type of load carriers and records this directly into the online platform. Your declaration is immediately processed when linked to an order. This prevents errors and makes the registration and administration of a shipment more efficient. Also, with a photo there is immediate proof of a shipment, if there are differences between sender and receiver

## Who is Stack&Track suitable for?

Our platform is suitable for growers, retailers and traders and works with a variety of load carriers - whether from poolers or your own crates or kegs. Whether you are a small business with one location, or an international company with multiple locations, Stack&Track can help you improve your business process. Stack&Track puts an end to manual work, excel lists and receipt notes.

## What does Stack&Track cost?

You can use Stack&Track (including the app) for as little as € 30 per month (excluding VAT) including 5 users. This is the Basic licence. You can easily add extra users for € 5 per month per 5 users. Do you have a larger organisation with multiple locations? Then choose the Plus licence for € 60 per month (excluding VAT). Would you also like to set up and use your own logistics processes within Stack&Track or link them via APIs? This is possible within our Premium licence. The monthly licence fee for Premium depends on your requirements. We will gladly discuss these and make you a personal offer.

## The benefits

Our platform offers many advantages for growers, wholesalers and retailers:

**One platform** in which orders, declaration and administration of RTIs takes place with links to the main poolers. So you no longer have to log in to different systems.

**Real-time insight** into your packaging flow: With Stack&Track, you can track your load carriers 24/7, from the moment of dispatch to delivery.

This helps you identify abnormal quantities and communicate this directly with customers or suppliers.

**Cost savings.** By improving your packaging management, you can save costs on transport, storage, lost shipments/load carriers and staff.

**Increased productivity.** Through process automation and real-time visibility, you can increase your team's productivity. This allows you to react to changes and focus on value-adding tasks.

**Beter collaboration.** The online platform allows you to communicate with all parties involved in the supply chain, such as suppliers, transporters and customers. This ensures better cooperation and reduces the risk of misunderstandings and delays.

**Want to know how Stack&Track can  
work for your business?  
Then plan a free personal demo of the  
online portal and the app now.**
